

LABORATOIRE LTDS

TRIBOLOGIE ET DYNAMIQUE DES SYSTÈMES

Le LTDS répond aux enjeux socio-économiques dans les domaines :

Transport terrestre et aérien : améliorer la sécurité, accroître le confort, consommer moins d'énergie et réduire les pollutions.

Cadre de vie : construire des habitats, des ouvrages et des infrastructures durables et respectueux de l'environnement et des usages.

Santé : augmenter la qualité de vie en luttant contre le vieillissement des tissus humains et en améliorant les substituts tissulaires et articulaires.

Matériaux et procédés avancés : concevoir des matériaux et des traitements de surface à hautes performances et développer des procédés de fabrication innovants.

Energie : fiabiliser les moyens de production d'énergie, assurer la transition énergétique et mieux utiliser les ressources naturelles.

POUR LES FILIÈRES INDUSTRIELLES

Aéronautique, Automobile, Chimie et Matériaux, Ferroviaire, Industries pour la construction, Industries et technologies de la santé, Mode et Luxe, Transformation et valorisation des déchets

MOYENS

- Dynamique des machines tournantes** (Equipex PHARE « plateforme machines tournantes pour la maîtrise des risques environnementaux »).
- Tests mécaniques** et thermomécaniques sur matériaux et structures.
- Centre d'ingénierie du vivant.**
- Plateforme de tribométrie** avancée et de caractérisation des surfaces, durabilité.

	Personnel ETP 236
	Recettes partenariales 7 555 K€
	Doctorants 158
	Publication rang A/an 152

LTDS LABORATORY

TRIBOLOGY AND SYSTEMS DYNAMICS

Le LTDS meets the socioeconomic challenges facing society in the following areas:

- Land and air transport:** improving safety and comfort, lowering fuel consumption and reducing pollution.
- Living environment:** functionally adapted, environmentally friendly and sustainable housing, structure and infrastructure construction.
- Health:** improving the quality of life by combating the ageing of human tissues and by improving tissue and joint substitutes.
- Advanced materials and processes:** designing high performance materials and surface treatments and developing innovative fabrication processes.
- Energy:** increasing the reliability of energy production procedures, ensuring energy transition, and using natural resources better.

FOR INDUSTRIAL SECTORS

Aeronautics, Automotive, Chemicals and Materials, Railways, Construction industries, Health industries and technologies, Fashion and Luxury goods, Waste transformation and recovery

RESOURCES

- **Dynamics of rotating machines** (Equipex PHARE "Rotating Machine Platform for Controlling Environmental Risks").
- **Mechanical and thermomechanical tests** on materials and structures.
- **Living tissue engineering centre.**
- **Advanced tribometry** and surface characterisation platform, durability tests.

	Full-time equivalent 236
	Partnership receipts € 7 555 00
	PhDs 158
	Publications in top flight journals/year 152

MEMBER OF

TECHNOLOGICAL KNOWHOW

The laboratory's knowhow is organised according to four areas of competence:

> **DYNAMICS OF COMPLEX SYSTEMS:** modelling, simulation and experiments with vibrations, ranging from vibro-acoustics to non-linear and uncertain dynamics.

> **GEOMATERIALS AND SUSTAINABLE CONSTRUCTION:** modelling, simulation and experiments with soil and granular media, study and characterisation of raw materials and biosources, characterisation of materials for road and rail infrastructures, and studies of structures (dikes, dams, tunnels, etc.).

> **MATERIALS AND PROCESS MECHANICS:** modelling, simulation and experiments on the mechanics of living organisms, machining processes and additive manufacturing.

> **TRIBOLOGY, PHYSICO-CHEMISTRY AND INTERFACE DYNAMICS:** modelling, simulation and experiments in tribology. Study of elementary, mechanical, physical and chemical phenomena and their coupling in tribological tests. Analyses of fretting and fatigue of materials, and the dynamics of lubricated interfaces coupled with vibrations.

PARTNERSHIPS

Airbus, Groupe Safran, Groupe Thalès, Alstom, EADS, Plastic Omnium, PSA, Michelin, Eiffage, Lafarge, IHI Corporation, Liebherr, Areva, EDF, Faurecia, HEF Group, ESI Group, Chanel, Hexcel Composites, Poma, Clarins, Radiall, CETIM, Vibratec, Wheelabrator, Santarelli, Magnum Pirex...
